UNIVERSAL MIND / I AM

A PLACE TO BELONG

A DIRECT RESPONSE TO ORYGEN + PHOENIX AUSTRALIA'S
"THE NEXT POST: YOUNG PEOPLE TRANSITIONING FROM MILITARY SERVICE AND THEIR MENTAL HEALTH"

Your service does not end your place in society. I AM is an open invitation from electronic music and fashion culture to young female Australian veterans living with anxiety or PTSD. We are a free, digital mental health service.

THE TRANSITION

Transitioning from military service can mean losing more than a role. **Women veterans are twice as likely to die by suicide as civilian women** (DVA, 2025). The transition can also strip away the structure, identity and community that service provided, leaving women veterans more vulnerable to mental illness than civilians, all while feeling "invisible" in civilian life (Lawn et al., 2024). Stigma, location and cost are key hurdles to young veterans seeking mental health support (Orygen, Phoenix).

THE CULTURAL PROPOSITION

Mental health support needs to meet young people in the places they trust and where they already spend their time. I AM places mental health support inside electronic music and fashion culture, where young people find identity, community and belonging.

(Supporting evidence: Outfit of the Day (#OOTD), a fashion hashtag, has more than 50 billion TikTok views. In 2019, music accounted for 83% of YouTube videos exceeding one billion views. Le Monde, 2023; Pex, 2020.)

I AM offers referral pathways. I AM additionally offers free mental health support - **EMDR, brain entrainment and silent mantra**, complementing existing therapies and medications, via reduced short-term stress and increased connection.

MENTAL HEALTH BARRIER	I AM MENTAL HEALTH RESPONSE
STIGMA	**ENTERTAINMENT** - place mental health support inside culture.
ACCESS + LOCATION	**DIGITAL** - online mental health support, available wherever somebody is and between appointments.
COST	**FREE** - remove price as a barrier to mental health support.
ISOLATION + BELONGING	**CULTURE + HUMAN CONNECTION** - create an additional place to belong, with pathways towards peers and qualified mental health support.

RESEARCH + RCT

811 REVIEWED RESEARCH ENTRIES | 667 PUBLICATIONS

Universal Mind has assembled and graded a public repository spanning clinical, remote and group EMDR; music and auditory-beat interventions; and mantra-based practice. It prioritises clinical guidance, systematic reviews, meta-analyses and randomised controlled trials, preserving limitations and translation gaps.

EMDR A - established core clinical evidence **SOUND B** - developing evidence **MANTRA B** - supported practice

The RCT is a scientific study attached to that wider mission, examining whether a 10-minute online group intervention combining saccadic eye-movement stimulation (EMDR), adaptive isochronic brain entrainment and silent mantra, delivered within electronic music television, produces measurable immediate reductions in stress and increases in felt connection.
