UNIVERSAL MIND / I AM

# A PLACE TO BELONG

A DIRECT RESPONSE TO ORYGEN + PHOENIX AUSTRALIA'S
"THE NEXT POST: YOUNG PEOPLE TRANSITIONING FROM MILITARY SERVICE AND THEIR MENTAL HEALTH"

An open invitation from electronic music and fashion culture to young female Australian veterans transitioning from military service to civilian life.

## THE TRANSITION

Transitioning from military service can mean losing more than a role. Young ex-serving people may experience disruption to social support, shared identity, purpose and belonging. For Australian women veterans, transition can also involve feeling insufficiently recognised within veteran systems and civilian life.

## THE CULTURAL PROPOSITION

I AM is designed as an open invitation into an additional civilian community - not a replacement for military identity or clinical care. Electronic music and fashion are treated as participatory cultures through which people can express identity, find peers and experience belonging.

| BARRIER | DESIGN RESPONSE |
|---|---|
| **STIGMA** | **ENTERTAINMENT** - place support inside culture rather than behind a clinical front door. |
| **ACCESS + LOCATION** | **DIGITAL** - mobile-first support, available wherever somebody is and between appointments. |
| **COST** | **FREE** - remove price as a barrier to showing up. |
| **ISOLATION + BELONGING** | **CULTURE + HUMAN CONNECTION** - create an additional place to belong, with pathways towards peers and qualified support. |

RESEARCH BEFORE CLAIMS

## 811 REVIEWED RESEARCH ENTRIES / 667 PUBLICATIONS

Universal Mind has assembled and graded a public repository spanning clinical, remote and group EMDR; music and auditory-beat interventions; and mantra-based practice. It prioritises clinical guidance, systematic reviews, meta-analyses and randomised controlled trials, preserving limitations and translation gaps.

**EMDR A** - established core clinical evidence **SOUND B** - developing evidence **MANTRA B** - supported practice

## THE RESEARCH QUESTION

Can a free, culturally embedded digital experience create measurable short-term changes in stress and felt connection - while providing a credible bridge towards human and clinical support?
